Environmental Policy

We plant and care for trees and woodland ecology, and we pick, process and distribute fruit, improving the environmental quality of land and lives. We recognise that we should minimise our environmental impact at every step, as part of maximising our positive impact as a small charity of volunteers.

We will strive to improve land for ecological and community benefit throughout the Malvern Chase area and improve health and well-being. We do this through promoting our community woodland experiences and fruit picking and distribution projects.

We aim to minimise any negative environmental impacts and ensure legal compliance.

We will minimise pollution of the land, air or water and we will take all reasonable steps to prevent pollution at its source. We will avoid hazardous processes or materials.

We will aim to conserve natural resources by minimising the use of non-renewable materials, by recycling materials, by minimising energy use, and by using recycled products and packaging. We will continue to seek waste minimisation opportunities.

We will encourage our suppliers and customers to take positive actions in areas such as transport, recycling and purchasing. And we will partner with as many organisations as we are able to benefit the environment and the community.

All the volunteers and members of MCF are asked to maintain compliance with this policy, to take positive action themselves and to promote positive environmental and community engagement whenever possible.
